Three reasons to consider the Invesco Dynamic Growth Index

- 1 Dynamic multi-factor**
 Stock exposure adjusts to the current economic regime by selecting companies with qualities suited for potential outperformance, while maintaining diversification across these varying market environments
- 2 Responsive bond exposure**
 The Index strategically allocates between long-term bonds and cash to adapt to changing market conditions
- 3 Adaptive asset allocation**
 Exposures to stocks, bonds, and cash are adjusted daily to seeking to help deliver a smoother performance profile for the Index over time.

The Invesco Dynamic Growth Index adapts to changing market conditions utilizing three key features aimed at delivering attractive results on a steady path.

The centerpiece of the Invesco Dynamic Growth Index is a dynamic multi-factor approach. Value, momentum, quality, low volatility and size are stock characteristics, or factors, shown by academics and practitioners to deliver more attractive returns historically than the broad market.

Source: Invesco Indexing. January 31, 2007 to December 31, 2024. The Invesco Dynamic Growth Index was launched on February 18, 2022. All data prior to a launch date is back-tested (i.e., calculations of how the index might have performed over that time period had the index existed). Back-tested performance is subject to inherent limitations because it reflects retroactive application of an index methodology and selection of index constituents with the benefit of hindsight. Past performance, actual or back-tested, is no guarantee of future performance. Annualized Volatility is the standard deviation of monthly returns.

*The performance reduction is a return adjustment to facilitate higher crediting rates within annuity & insurance products. Please see the index methodology for more information.

In periods of high volatility, it may be possible for the index to be comprised heavily or fully of bonds and / or cash, which may persist as volatility is elevated. Due to excess return index construction, cash allocations in the index are non-remunerated.
